

Study of Exports and imports in Textile Hosepiping, similar Textile Tubing, with or without lining, Armor or Accessories of other materials of Pakistan

Muhammad Ali, Ibrahim and Danish Hassan, *Department of Textile & Clothing, National Textile University, Karachi Campus.* ali.ikhtiar406@gmail.com

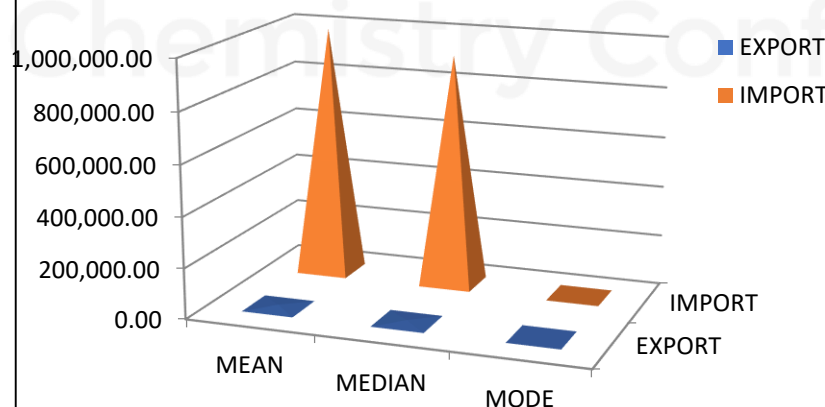

Textile hosepiping is the flexible piping in which water or other materials can be transfer through it. It can be cover with textile material with different weave. Fabric hose is essentially circulated over pipe. Textile tubing is the tube cover with textile material. Armour and accessories are also made from textile materials.

Comparison Between Export and Import:

CENTRAL TENDENCY	EXPORT	IMPORT
MEAN	7,067.8	995,459
MEDIAN	5,439.5	922,026.5
MODE	0	0

The coefficient of variation for export and import are:
 $CV_{\text{export}} = 71.79\%$
 $CV_{\text{import}} = 41.32\%$

The central tendency of imports depicts the normal distributed approximately as compared to exports values and the value of coefficient of variation of imports is less than the value of exports, its mean the imports are smooth (stability) year by year.
